

A Working Title for Your Operational Research Paper

Ada First Author* and Ben Second Author

¹*Department of Operations Research, University of Somewhere, City 1000, Country*

²*School of Management, Institute of Elsewhere, Other City 2000, Country*

Abstract

Replace this with a concise abstract. State the problem, the operational research approach, the main methodological contribution, and the key result. Keep it self-contained and free of citations and undefined abbreviations.

Keywords: OR in practice, Optimization, Heuristics

1. Introduction

Motivate the problem and position it against recent OR literature. State the contribution explicitly near the end of this section. Cite sources with the @key syntax, for example [\[1\]](#).

2. Problem Formulation

Define notation, decision variables, and constraints. Numbered equations look like this:

$$\min_{x \in X} \sum_{i=1}^n c_i x_i \quad (1)$$

*Corresponding author. E-mail address: ada.author@university.edu

8 Reference equations by label, e.g. (1).

9 For an unnumbered equation, tag it with the template's special label:

$$g(x) = Ax - b$$

10 3. Method

11 Describe the model, algorithm, or solution approach. Split distinct ideas
12 into their own subsections rather than one long block.

13 3.1. *Solution Approach*

14 Outline the procedure here.

15 3.2. *Complexity*

16 Comment on computational complexity or convergence here.

17 4. Computational Experiments

18 Summarize instances, parameters, and hardware, then report results. A
19 figure placeholder:

20 Figure 1: Replace with your result plot.

21 Reference it as 1.

22 5. Conclusions

23 Summarize findings, limitations, and directions for future work.

24 A. Supplementary Derivations

25 Move long proofs or extended tables here.
